

STRENGTHENING SAFE DRINKING WATER FACILITIES IN MUNICIPAL CORPORATION SCHOOLS OF DELHI

A Report 2012

Background

SARD is currently working with more than 200 MCD schools in Delhi, after surveying these schools it was found that majority of children were suffering from water borne diseases. The main reason behind this was poor drinking water facilities in schools that caused various health problems and was not able to cover the total school population, in addition, the maximum temperature invariably remains above 40 degree Celsius between May-October each year and the water available for drinking becomes excessively hot in the extreme weather conditions during summer. This is another reason for the absenteeism in school.

Water borne diseases are caused mainly due to pathogenic micro-organisms which are directly transmitted when contaminated water is consumed. According to the World Health Organization, diarrhea disease accounts for an estimated 4.1% of the total daily global burden of disease and is responsible for the death of 1.8 million people every year. It was estimated that 88% of that burden is attributable to unsafe water supply, sanitation and hygiene, and is mostly concentrated in children in developing countries.

Adequate supply of fresh and clean drinking water is a basic need for all human beings on the earth, yet it has been observed that millions of people worldwide are deprived of this. Industrial growth, urbanization and the increasing use of synthetic organic substances have serious and adverse impacts on freshwater bodies. Many areas of groundwater and surface water are now contaminated with heavy metals, POPs (persistent organic pollutants), and nutrients that have an adverse affect on health.

Provision of Clean & fresh drinking water within schools is a necessity to protect the health and assist the hydration of children and staff. It is important that water is free and fresh, and presented in an easy to use and hygienic way, and preferably chilled.

The main sources of water in MCD schools are ground or tap (surface) water that results in various water borne diseases. As SARD and Plan India works towards providing safe and healthy atmosphere to children and prevent children from unhealthy water sources, it was also proposed to install water coolers in 160 MCD schools with filtering facilities within a span of one to two months benefitting around 1,80,000 students, teachers and non teaching staff.

Objectives:

- To provide safe and clean drinking water to children in MCD schools
- To provide water to children in extreme weather conditions
- To avoid water borne diseases in schools
- To ensure retention in schools as students might skip schools due to unavailability of basic needs.
- To provides low cost refreshment throughout the day
- To promote good health and reduces tiredness, irritability caused by thirst.

- To demonstrate parents' and the local community that the school values pupils' health and wellbeing
- To raise awareness of the importance of adequate fluid.

The Process

In pursuance of the above objectives, Plan India issued approval for installation of Water coolers of 150 litres capacity with filtering facilities to ensure clean and cool drinking water for the whole school, initially in 80 schools and again the same number of water coolers in second phase. SARD as an implementing partner ensured official permission to install a water cooler with filter of above specifications and ensuring its future maintenance from the Director of Education, Municipal Corporation of Delhi in the west zone. A directive to this effect, from the Director, also was issued to the concerned school authorities where the coolers were planned to be installed. **(Annexure 1 letter from Director)**

After deciding on the size, specification etc., a committee comprising of representatives from Plan India and SARD was formed to decide on the purchase process. Plan India representatives drew an ideal list of features for the water cooler to be purchased and different manufacturers were contacted seeking supply of water coolers as per specifications drawn and were requested to quote their competitive price in a sealed envelope. Manufacturers like, Usha, Voltas, Sidwal supplied information as sought for, with their respective quotes. Blue star declined to send quotation reasoning out that they do not manufacture coolers complying with the specifications drawn. The quotations in sealed envelope were opened in front of the committee wherein Plan India and SARD representatives were present. All quotations were opened and signed by all members present and on verification of its contents, they were documented. After comparing the information supplied, it was unanimously decided to purchase Voltas Brand water cooler. **(Documentation of proceedings attached for ready reference as Annexure 2)**. Accordingly the manufacturer was contacted, who in turn identified and recommended their authorized dealers from whom the supply of 80 water coolers could be ensured. The rates quoted were not inclusive of the installation charges and that had to be additionally paid over and above the cost of the cooler, filter, voltage stabilizer. However, the prices negotiated for the supply of 80 coolers, stabilizers and water filters are the lowest retail price in all over India, and also less than the decided quote. This could be made available due effective bargaining contacting offices of respective companies at Mumbai, Pune, and Delhi etc.

Upon forming the order, lists of schools were drawn for installation into which the coolers were installed satisfactorily as per attached list. The Photographs before installation of a cooler, during the installation of a cooler and children enjoying drinking water from installed coolers is attached.

Plan India got the permission to install water coolers and filters in 80 schools in First Phase. The installation of water coolers started from 20th June till 30th June 2011.

Organization:

SARD and Plan India together have installed 160 water coolers in Delhi.

Challenges faced by SARD implementing team

- Though adequate plan was made for installation of the coolers, there were a number of challenges faced by the implementing team as in some places, the school authorities were not able to designate a apt place for the cooler and were seen differing in opinions to locate the cooler.
- At few schools, the designated places did not have provision for wiring and the school authorities were not ready to spend for the additional wiring and switch boards required.
- In few schools, the place offered was really constrained with obstacles and access was difficult.
- In some schools they have the saline water, which is not good for drinking and as well as for water cooler. It will damage the body of water cooler also.
- The school authorities did not allow the implementation team to stay beyond the school time and were not cooperative.

All the above issues were shared with the Zonal Director and upon his intervention the things started moving smoothly.

Phase 2

The second phase involved, installation of water coolers in the next 80 MCD schools and also the remaining 11 schools of the first phase which were selected after due consultation. The second phase was more like a completion phase of the project but with greater and better dreams that were planned for the future of MCD schools, through the learning that was gained from the implementation of this project. It was understood that, not only water problems, but, health and sanitation issues as a whole needed to be addressed at these schools which were at stake. A systematic way had to be followed to tackle all these issues and at least mould a few MCD schools in a way that they serve as a model for the remaining schools to reach par excellence and at levels of any other private schools with not only quality education but also quality life.

The challenges faced in the first phase were kept in mind and worked upon cautiously to avoid any similar problems in this implementation phase and also the schools which had a supply of saline water were removed from the list of beneficiaries.

It was also kept in mind that before installing the water coolers, an apt place was found for it without any obstacles and also has a provision of safe and proper wiring. An effort was taken to see that all the water coolers were installed during the school timings so as to

avoid the technical team of water coolers staying back after school timings, which was not acceptable by certain schools.

Despite of the above steps, installation at some schools was difficult but under the proper guidance and coordination by SARD the challenges were tackled effectively and the water coolers was installed successfully.

Some of the conditions that were kept in mind while installing water coolers were:

- The cooler is not installed in any area where the water is prone to contamination and unhygienic situations
- Source of electricity supply is out of reach of children so as to avoid any fiddling with it.

Inauguration

The project was formally launched by Dr. Mahender Nagpal Chairman Education committee (Municipal Corporation of Delhi). Speaking on the occasion Mr. Nagpal reiterated MCD's commitment to provide safe water to each and every student in schools under MCD, Mr. Nagpal also stated that according to the study done by the department of health (MCD) it was found that 18% of the water supplied by the Delhi Jal board (DJB) was contaminated hence it was extremely necessary to supply water filters and water coolers to these schools.

Dr. (Mrs) Premlata Kataria (Director Primary Education) MCD expressed her sincere gratitude to Plan India and SARD in supporting the noble cause for the most deprived children of Delhi. She said she will invite more civil societies to support such initiatives in strengthening education system in Delhi. Mr. Vibhuti Pandey from Plan India conveyed his support to MCD and SARD and reiterated Plan's Work towards improving quality education in MCD schools. Mr. Sudhir Bhatnagar (CEO- SARD) briefed participants about the water cooler initiative and other quality improvement steps taken by the organization in schools.

Feedback from schools:

The water coolers have been installed in 310 MCD schools (160 Water Coolers). Principals and teachers were extremely grateful to SARD and Plan India for installing water coolers in their respective schools and providing clean and cool water to their children and staff in such hot weather condition. Principals also took the charge of maintenance of the water coolers and assured the staff of both the organizations that they will make sure that water coolers would be in full utilization. Children were excited with the thought that now they will get the facilities of cold and clean water in schools.

SARD made a presentation on the assets being created, its type, quality and value in front of the Chairman of Education Committee of Delhi, who appreciated the efforts of Plan India contribution and SARD's initiatives. In one of the schools, the Deputy Chairman himself visited to see the water cooler installed and being operated.

Services provided

The initial service for the water coolers would be provided free of cost for a year from the date of installation by the service providers and after that period it would be the sole responsibility of the MCD school authorities to maintain the proper working of the water coolers and its servicing.

The team of SARD gave an overview to the school authorities of the ways in which the water coolers could be maintained along with inputs from the Voltas technical team.

The suggestions included:

- Avoiding washing dishes in the cooler and using the cooler as a wash basin
- Regular servicing of the coolers after the one year free service term
- Regular and uninterrupted supply of electricity for the continuous functioning of the cooler.
- Avoiding any kind of water logging in and around the water cooler etc.

Right to water is a universal right, which states that all the individuals are entitled to safe and hygienic drinking water supply, thus this intervention of SARD was a step in ensuring the same. As the saying goes ““Drink does not drown care, but waters it, and makes it grow faster” with this thought in mind, SARD would keep working to ensure not only the right to water or the right to education but also a complete right to life. While providing the water coolers , the team realized that other than drinking water supply, there were other issues too that are to be addressed in the MCD schools in areas of health and sanitation, and the project of installation of these water coolers served as a platform to understand the needs of the MCD schools. SARD has hence decided to take up few MCD schools (one school from each of the zones) and form them to Models, which can be replicated to all the remaining schools under the MCD.

But, just by providing the schools with all these supports, makes them mere beneficiaries. For a sustainable and long term result, quality education and ownership of the project by the community (MCD) is highly essential, hence along with all these provisions, the team of SARD makes sure that the students, teachers and the school authorities take up the ownership of all these projects, while, promoting the right to education simultaneously, as education forms the basis for a healthy lifestyle like it is stated “Education is a progressive discovery of our own ignorance.” ~Will Durant

Phase 2- Continued

The following activities were undertaken in continuation of the 2nd phase. Wherein the remaining works in the project were undertaken, before the projects comes to a close. All the activities planned for the second phase were successfully completed.

Risk assessment of all schools

A risk assessment format was provided to all the schools, which were completed and submitted. This was completed by all the 160 schools before any kind of prior notice.

Water quality testing of all source points

This activity could not be proceeded as, after the ground works it was seen that, conducting the water testing for 160 schools, costs much more than the stipulated budget. Hence the given budget was returned back to Plan India.

Celebration of Global Hand washing day

Society for All Round Development (SARD) supported by Plan India, observed Hand Washing Day in 50 of its project schools on 24th November 2011. There was a grand event held at two schools, MCPS Mahavir Enclave, Shift 1 and MCPS Chand Nagar 3rd block, shift 2. Demonstration on the steps of Hand Washing was done in each of the schools followed by a talk on the importance of Hand Washing and health and hygiene. An array of placards was displayed by students in the schools to motivate them on the significance of the act of Hand Washing. **(Photographs in annexure 11)**

Wall painting in all schools

The wall painting depicting the importance of safe drinking water was completed in all the 160 schools wherein the water cooler was placed. Some paintings also brought out the importance of health and hygiene concepts. **(Photographs in annexure 12)**

Video documentation of the project

The video documentation process for the project has been completed and the first draft is prepared. The before and after situation of the schools, where water coolers were given, was covered in the same. The process included an interview with the school management, teachers and students. **(Photographs in annexure 13)**

Minor plumbing work

Minor plumbing works in all the schools were carried out, as without minimum plumbing work, no water cooler could be fitted. Some connections and fittings works which were mandatory were completed in all the 160 schools.

Conclusion

This project aimed at providing Chilled, fresh and clean drinking water to selected MCD schools, which would therein serve as a model that can be adopted by MCD in their remaining schools so that the children are free from any kind of water borne diseases at least in the school premises and do not face problems of dehydration and regular fluid intake can protect against the effects of poor hydration, which includes poor concentration, tiredness, urinary problems and headaches. Mainly water, being a freely available drink, can positively contribute to fluid intake, protect health and assist in obesity management.

Annexure -1: Permission of First Phase Installation

MUNICIPAL CORPORATION OF DELHI: EDUCATION (HQ)
15TH FLOOR, DR S. P. MUKHERJEE CIVIC CENTRE,
JAWAHARLAL NEHRU MARG, MINTO ROAD, DELHI

No. D/17/DIR/PE/11

Dated: 02 June, 2011

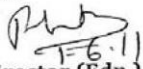

To
Sh. Vijay Rai,
State Programme Manager
Plan India,
Delhi

Sub. : Permission to install Water coolers with water filters in selected MCD schools of Shahdara North, South, Najafgarh and West Zones of Delhi

This is with reference to your letter on the above quoted subject, in which it has been mentioned that Plan India is willing to install Water Coolers with filters in selected MCD Schools as part of their *Education Support Programme* in schools. In this connection, we wish to inform you that you are allowed to install these coolers with filters in our schools on the following terms and conditions:

- MCD is not responsible for any cost related to coolers/ filters and also for their installation. However, MCD will provide suitable space and other necessary support in their schools, including maintenance. The list of schools is attached as annexure to this letter.
- Plan India & SARD will be responsible for the quality of the product, and also they will have to take care of the safety and security of the children.
- All the installation work in the school will be implemented in coordination with concerned Zonal Dy. Director/ School Principal.
- Plan India & SARD can use their logos on water coolers to be installed in respective schools.
- MCD will not have any financial implications, for installation of water cooler/ filter in their Schools; however MCD will be responsible for maintenance of the coolers after completion of one year guarantee/warranty.
- Plan India/SARD will have to submit a report after completion of the work.
- Permission granted can be withdrawn at any time without assigning any reason thereto.

Plan India and SARD are requested to contact DDEs of West, Najafgarh, Sh. (North) and Sh. (South) Zones for the finalization of Schools. Concerned Zonal DDEs are directed to lend a helping hand to the Plan India-SARD team for installation and implementation of the above task. Zonal DDEs are further instructed to send the list of schools finalized with Plan India and SARD to the office of the undersigned.

Director (Edn.)

Copy to:

1. Addl. Director - I / II / III
2. Zonal DDEs of West, Najafgarh, Sh.(South) and Sh. (North) Zones
3. DDE (Capital Works) with the direction to keep a record of these water coolers
4. ADE (R&E)/ADE (PROJECT)

Copy for information to :

1 / Mr. Sudhir Rhatnagar, CEO- SARD

Annexure 2:

(Minutes of the meetings of vendor selection committee) Minutes of the meetings

Date: 15th June 2011

Venue: SARD Office

311, Kirtideep Building, Nangal raya complex New
Delhi-110 046

Purpose: BID opening and finalization for supply of water coolers for installation in MCD schools.

Members present:

Plan India	SARD
Ms. Neelima Pandey	Mr. R. Narendhar
Mr. Bhaskar	Ms. Annu Jha
	Mr. Shiv Shankar Jha
	Ms. Pooja Banerjee

The following suppliers had sent their quotes in sealed envelopes and have been opened in the presence of above members today. The details of the quotes are as under:-

S.no	Name of the supplier	Unit cost	Terms and conditions	Remarks
1	Voltas	32960 37080(inclusive of vat)	Validity 30 th June 2011	Rs.1800 extra for stabilizers with 12.5% vat
2	Sidwal	36000(vat inclusive)	Validity 15 days	
3	Usha	48,400 54900(vat included)	Warranty 12 months	
4	Aquaguard filter	9490(VAT included)	Validity 30 days Warranty 12 months	

Scrutinizing the above quotes, and based on detailed discussions on the brands, its reputation, after sales service etc., it was unanimously decided and agreed to place orders in favor of **Voltas Tushar Water cooler Model No: FSS 150/150** having full stainless steel Body with a tank and cooling capacity for 150 litres per hour at S.no. 1 at a cost price of 37080(inclusive of vat) for model no. and stabilizer at an extra cost of Rs.2025/- inclusive of 12.5% VAT. (The detailed analysis of quotes as per Plan India specifications are an annexure I). The installation charges for the above shall be extra, which needs to be ascertained from the suppliers.

After deciding on the model and brand above, it was also decided to get quotations from two more dealers to verify the costs, stock, delivery time, installation etc. The orders may be firmed after getting quotes where the efficient may be awarded in consultation with Plan representatives. This exercise may be done on an urgent basis and finalized by 16th June 2011.

The committee also decided to go for water filters on an a need based mode after assessing availability of water filters at schools, its present operational status and duly taking into the source of drinking water (viz., from MCD taps and(or) bore wells)on a case by case mode duly taking consent from Plan India representatives .

Annexure3: Drinking water facilities before intervention

Annexure4: Drinking water facilities after project intervention
